Problema nº 6. Ondas sobre enerdas

$$P = \frac{1}{2} \mu w^{2} A^{2} v$$

$$T = \frac{\lambda}{v} = \frac{1}{f} \implies f = \frac{v}{\lambda} ; w = 2\pi f = 2\pi . \frac{v}{\lambda}$$

$$\mu = \frac{m}{L}$$

$$P = \frac{1}{2} \frac{m}{L} (2\pi v)^{2} . A^{2} v$$

$$P = \frac{1}{2} \frac{m}{L} 4\pi^{2} \frac{v^{2}}{\lambda^{2}} A^{2} v = 2\pi^{2} \frac{m}{L} \frac{v^{3} A^{2}}{\lambda^{2}}$$

$$P = \frac{1}{2} \frac{m}{L} 4\pi^{2} \frac{v^{2} A^{2} v}{\lambda^{2}} = 2\pi^{2} \frac{m}{L} \frac{v^{3} A^{2}}{\lambda^{2}}$$

$$P = \frac{1}{2} \frac{m}{L} 4\pi^{2} \frac{v^{3} A^{2} v}{\lambda^{2}} = 1064,83 w$$

$$= 1,06 \text{ Kw}$$
